

**ENCRYPTION OF QUERY EXECUTION DETAILS IN
A DATABASE MANAGEMENT SYSTEM**

Abstract of the Disclosure

An apparatus, program product and method log execution of a query in a database management system with one or more execution details encrypted to restrict access to those execution details by unauthorized parties. Execution details such as SQL
5 statements, and values passed to parameter markers and/or host variables associated with the queries executed on a database management system may therefore be kept confidential and made accessible only to authorized parties able to decrypt the execution details.
